

CSS

- CSS stands for Cascading Style Sheets(CSS).
- CSS is used to enhance the look of the Webpage.
- CSS is a rule based language that applies styling to HTML elements.
- We write CSS rules in elements (<p>,), and modify properties of those elements such as color, background color, width, border thickness, font size, etc.

- CSS rule, is made up of two parts :

i). selector

ii). Declaration

Example :-

```
H1 {color : blue; font-size:30px;}
```

Selector – H1

Declaration – color : blue;

font-size:30px;
